

Please recognize the CapTel as a fundable telecommunications service! I have been using this wonderful captioned telephone since March in my home and it has been a life saver! I got a cochlear implant in April and was deaf for a few months before my "activation" and would not have been able to communicate by telephone without the CapTel phone. I still use it as I am learning to hear on the phone with my cochlear implant. It has been so helpful. I think anyone deaf or hard of hearing would benefit from this remarkable technology! Won't you please make it available to all of us with hearing loss!?
